Exhibit A
Scope of Work

The Perkins+Will | JLG team will not only lead and coordinate all consultants, but also provide architectural design, interior design, signage, wayfinding & graphics, as well as providing input and assistance on FF&E (furniture, fixtures and equipment). Our team includes a complete service of required design engineers including: civil, structural, mechanical, electrical, telephone / IT, DAS, fire protection, plumbing, code, food service design, acoustical, audio & video design.

Site analysis and civil design will be of particular focus. The most likely location for an expansion to the existing campus will be to the northwest. The site has a topographical grade change that will provide some great opportunities. The sloping elevation of the site would allow patrons to enter the new facility from various levels, thus minimizing circulation stairs and escalators while creating a more dynamic interaction between the site, the building and the people in and around it.
