This count data shown is collected via short-term traffic counts of 2-3 days. Unlike permanent counters which collect traffic year-round, short-term counts can be taken only when weather permits, usually March through October. These counts represent a "snapshot" of the traffic conditions during the particular day(s) of the count and are seasonally adjusted in order to provide a better representation of traffic conditions on an average day (i.e. Average Annual Daily Traffic - AADT).

The user acknowledges and accepts the limitations of the Data, including the fact that the Data is dynamic and is in a constant state of maintenance, correction, and update.

No Count

For the purpose of this document, 'No Count' indicates that the traffic count data is not available or not applicable for the given location. This could be due to various reasons such as construction, data collection issues, or other factors that prevent accurate traffic counting.
