The commission reviewed the documents provided by the homeowner for the proposed project at 916 Saint Charles Street. This secondary structure is contributing; however, the primary structure is Non-Contributing. SHPO determined the proposal to be favorable to demolition of the secondary structure. Due to the siding being asbestos, it cannot be replaced in kind and would possibly render the structure Non-Contributing. The garage door relocation would allow access to the east/west alley instead of the north/south alley and mitigate the water issues that are occurring currently. The homeowner would also replace the siding, brick and shingles to match the home.

The commission feels that the relocation of the garage door is reasonable for access, and to improve the water issues currently occurring within the structure. They also agree it is important to note that this is a secondary structure, not primary. The commission acknowledged that the project will result in necessary repairs to the project, and that the extension of the roofline creates additional covered outdoor space. The city also does not require a permit for pergolas, so there is no review from HPC for these.

Saunders moved to approve the project proposal as a feasible alternative to demolition. The motion was seconded by Williams and carried unanimously.
