

Safe and Secure Grant Program

The Safe & Secure Grant Program will address low cost projects that improve safety, security, and conservation of water and energy, costing less than \$1,000 in materials and labor, to assist homeowners with incomes below 80% of the HUD Area Median Income (AMI).

Activities eligible include, but are not limited to, installation of fire sprinkler systems, smoke detectors, deadbolts, handrails, exterior motion detector lights, and other devices for security and safety purposes, and conservation improvement through installation of water saving faucets and shower heads, programmable thermostats, storm windows and doors, and insulation.

Funds may also be used to address emergency repairs.

Labor may be provided by approved contractors registered in the SAMS system, or approved qualified volunteers.

Homeowners *may not* be paid labor costs for rehabilitation on their own property.

Maximum grant = \$1,000.

Grants allocations will be based on completed applications with supporting documents - first come, first served until funding runs out.
